## EXECUTIVE SUMMARY

The proposed residential development is to be generally located west of Chocolate Drive between 5<sup>th</sup> Street and Gepford Parkway on approximately 45.51 acres within APN 502-250-09 in Reno, Nevada. The site is currently undeveloped. Upon project completion in 2025, the proposed development is anticipated to consist of approximately 240 units of two-story low-income affordable multifamily housing.

Regional access to the residential development is expected to be provided via Sun Valley Boulevard. Primary access to the project is given by Chocolate Drive and 2<sup>nd</sup> Avenue. Direct access to the site is planned to be provided by one (1) full access driveway along Chocolate Drive at the intersection of Chocolate Drive and Gepford Parkway. Emergency Access is expected to be provided at the intersection of Chocolate Drive and 5<sup>th</sup> Avenue. This will be restricted with an emergency access gate.

The Washoe County scope of study, dated November 24, 2021, identified intersections for full analysis. Based on changes to the site plan and site circulation, two (2) additional intersections along 2<sup>nd</sup> Avenue were included for analysis:

- Chocolate Drive and 5<sup>th</sup> Avenue (#1)
- Sun Valley Boulevard and 5<sup>th</sup> Avenue (#2)
- Sun Valley Boulevard and 2<sup>nd</sup> Avenue (#3)
- Chocolate Drive and 2<sup>nd</sup> Avenue (#4)

The scope of study from Washoe County is included in **Appendix A**. The study area intersections are shown in **Figure E-1**.

Full buildout of the residential development is anticipated to generate approximately 96 AM peak hour trips and approximately 122 PM peak hour trips to the surrounding street network.

The proposed residential development traffic is anticipated to generate traffic volumes resulting in the following recommendations:

- The developer is recommended to install R1-1 “STOP” signs with appropriate pavement markings for the egressing access drive approaches along Chocolate Drive per current Manual on Uniform Traffic Control Devices (MUTCD) Guidelines.
- All on-site and off-site signing and striping improvements should be incorporated into the Civil Drawings and conform to the current MUTCD, as applicable.
- The developer is recommended to install R11-3a “Local Traffic Only” sign at the intersection of Chocolate Drive and Gepford Parkway to discourage residents of the multifamily development from exiting from 5<sup>th</sup> Avenue.
- The intersection of Sun Valley Boulevard and 2<sup>nd</sup> Avenue (#3) operates at LOS D in the Background AM and PM peak hour scenarios. With optimized signal timing, the intersection operates at LOS C in the 2025 Background plus Project AM and PM peak hours. Therefore, it is recommended that the County work with RTC Washoe to optimize the signal timing at the intersection of Sun Valley Boulevard and 2<sup>nd</sup> Avenue (#3) to accommodate future traffic volumes.
- The project is not anticipated to have significant impacts to the study intersections and the surrounding street network.

## 1. INTRODUCTION

Kimley-Horn and Associates, Inc. has been retained by Pedcor Investments, a Limited Liability Company to prepare a traffic impact study for a proposed low income, multi-family residential development. The purpose of this traffic impact study is to identify traffic generation characteristics of the proposed development, identify potential traffic related impacts on the local street system, and develop mitigation measures required for the identified impacts.

The proposed residential development is to be generally located west of Chocolate Drive between 5<sup>th</sup> Street and Gepford Parkway on approximately 45.51 acres within APN 502-250-09 in Reno, Nevada. The site is currently undeveloped. Upon project completion in 2025, the proposed development is anticipated to consist of 240 units of low-rise multifamily housing. A site plan for the proposed development is located in **Appendix F**. The location of the project site with respect to the City of Reno is shown on **Figure 1**.

Regional access to the residential development is expected to be provided via Sun Valley Boulevard. Primary access to the project is given by Chocolate Drive and 2<sup>nd</sup> Avenue. Direct access to the site is planned to be provided by one (1) full access driveway along Chocolate Drive at the intersection with Gepford Parkway. Emergency Access is expected to be provided at the intersection of Chocolate Drive and 5<sup>th</sup> Avenue.

Figure 1 – Vicinity Map

Source: Nearmap

## 2. EXISTING CONDITIONS

This section of the report details existing conditions near the project site.

### 2.1. Study Area Intersections

The Washoe County scope of study, dated September 19, 2022, identified four (4) intersections for full analysis:

- Chocolate Drive and 5<sup>th</sup> Avenue/Drive A (#1)
- Sun Valley Boulevard and 5<sup>th</sup> Avenue (#2)
- Sun Valley Boulevard and 2<sup>nd</sup> Avenue (#3)
- Chocolate Drive and 2<sup>nd</sup> Avenue (#4)

The scope of study from Washoe County is included in **Appendix A**.

### 2.2. Existing Land Uses

The site of the proposed project is currently undeveloped. The area surrounding the project site is composed primarily of residential, commercial, and warehouse land uses. The location of the project site, study area intersections and existing land uses are shown on **Figure E-1**.

### 2.3. Existing Lane Configurations and Control

Regional access to the residential development is expected to be provided via Sun Valley Boulevard. The intersections of Chocolate Drive/5<sup>th</sup> Avenue (#1) and Chocolate Drive/2<sup>nd</sup> Avenue (#4) are currently rural intersections. Chocolate Drive and portions of 5<sup>th</sup> Avenue and 2<sup>nd</sup> Avenue are also currently unpaved, gravel roadways. Existing speed limits, lane configuration, and traffic control at the time of this study are illustrated in **Figure 2**.

### 2.4. Existing Turning Movements

AM and PM peak hour turning movement data was field counted on Tuesday, November 30, 2021, and Wednesday, September 28, 2022, summarized in **Table 1**. Count data sheets are provided in **Appendix B**.

**Table 1 – Peak Hour Turning Movement Count Dates**

Intersection	Count Date
Sun Valley Boulevard and 5 <sup>th</sup> Avenue (#2)	Thursday, November 30, 2021
Sun Valley Boulevard and 2 <sup>nd</sup> Avenue (#3)	Wednesday, September 28, 2022

**Figure 4** illustrates the 2021 existing peak hour traffic volumes.

## 3. FUTURE CONDITIONS

This section of the report details the conditions that are expected in the future at the time the proposed project is anticipated to be completed.

### 3.1. 2025 Background Lane Configuration and Control

Regional access to the residential development is expected to be provided via Sun Valley Boulevard. Expected speed limits, lane configuration, and traffic control in 2025 are expected remain the same as the 2022 existing speed limits, lane configuration and traffic control illustrated in **Figure 3** with the exception of the project access drive.

### 3.2. 2025 Background Traffic

To accurately determine the impact of project traffic, it is necessary to establish future baseline traffic volumes along roadways in the vicinity of the proposed development site. Evaluating a Nevada Department of Transportation (NDOT) count station in the vicinity of the project site resulted in a 2% growth rate. As such, a growth rate of 2% was used for this project site.

Existing year (2022) peak hour traffic volumes were grown for three (3) years at a 2 percent (2%) annual growth rate to obtain future background traffic volumes in 2025 when the proposed development is anticipated to be fully completed. The 2025 background peak hour traffic volumes at the key intersections are illustrated in **Figure 4**.

### 3.3. 2025 Background plus Project Lane Configuration and Control

Direct access to the site is planned to be provided by via Chocolate Drive and 2<sup>nd</sup> Avenue. Speed limits, lane configuration, and traffic control at the time of expected project completion in 2023 are expected to remain the same as the 2022 existing speed limits, lane configuration and traffic control, with the addition of the project access drives, as illustrated in **Figure 5**.

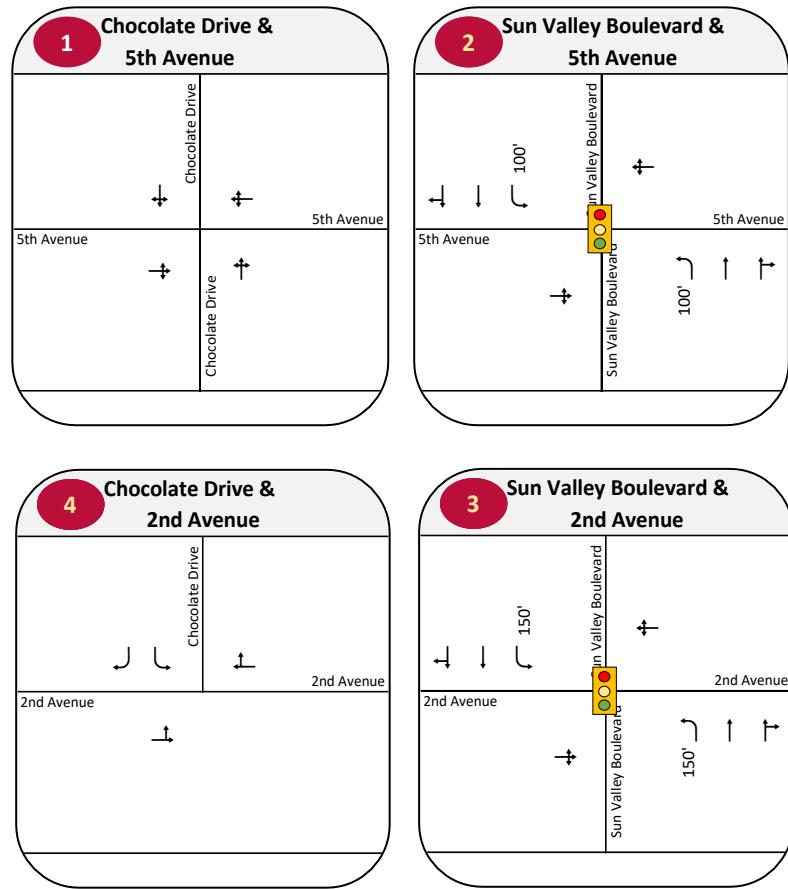

Figure 5 - 2025 Background Plus Project Lane Configuration and Traffic Control

**Kimley»Horn**

## 3.4. Project Trip Generation

For purposes of estimating the number of new vehicle trips that are anticipated to be generated by the proposed residential development, the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11<sup>th</sup> Edition (ITE Land Use Code 220 – Multifamily Housing (Low-Rise)) was used. The ITE Trip Generation Manual informational report is a standard reference used by jurisdictions throughout the country and is based on actual trip generation studies performed at numerous locations in areas of various populations.

**Table 2** summarizes the estimated project trips. The proposed development is anticipated to generate 96 AM peak hour and 122 PM peak hour trips. Calculations are provided in **Appendix C**.

**Table 2 – Trip Generation**

ITE Code	Description	Size	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
220	Multifamily Housing (Low-Rise)	240 Units	23	73	96	77	45	122

## 3.5. Project Trip Distribution

The study area street network characteristics, including the existing traffic patterns, expected street network, and access to regional facilities were used to determine the distribution of site-generated traffic. The directional distribution of traffic is a means to quantify the percentage of project-generated traffic that approaches the development from a given direction and departs the site in the same or a different direction. **Figure 6** shows the project trip distribution at the study area intersections.

## 3.6. Traffic Assignment

Assignment of project traffic was obtained by applying the developed trip distribution in **Figure 6** to the estimated traffic generation in **Table 2**. Project traffic assignment is illustrated in **Figure 7** for the study area intersections.

The entering and exiting trips at the project access drives are rounded to the nearest whole number when assigned. Therefore, the number of trips assigned may differ slightly from the total trip generation.

## 3.7. 2025 Background Plus Project Traffic Volumes

The project generated traffic volumes in **Figure 7** were added to the 2025 background traffic volumes in **Figure 4** to represent estimated traffic conditions for full project development in 2025. The 2025 background plus project peak hour traffic volumes for the study area intersections are illustrated in **Figure 8**.

## 4. TRAFFIC IMPACT ANALYSIS

Traffic analyses for 2022 existing, 2025 background, and 2025 background plus project scenarios were conducted at the identified key intersections to determine possible existing and/or future deficiencies in the street network.

### 4.1. Analysis Methodology

Study area intersections were analyzed based on average total delay analysis for signalized and unsignalized intersections presented in the Transportation Research Board's "Highway Capacity Manual" 6<sup>th</sup> Edition (HCM 6). Under the unsignalized analysis, the level of service (LOS) for a two-way stop-controlled intersection is determined by the computed or measured control delay and is defined for each minor movement. LOS for a two-way stop-controlled intersection is not defined for the intersection as a whole. LOS for a signalized or four-way stop controlled intersection is defined for the intersection as a whole. **Table 3** shows the definition of LOS for intersections.

**Table 3 – Level of Service Definitions**

Level of Service	Signalized Intersection Average Total Delay (sec/veh)	Unsignalized Intersection Average Total Delay (sec/veh)
A	≤10	10
B	>10 and ≤20	>10 and ≤15
C	>20 and ≤35	>15 and ≤25
D	>35 and ≤55	>25 and ≤35
E	>55 and ≤80	>35 and ≤50
F	>80	>50

*Definitions provided from the Highway Capacity Manual, 6<sup>th</sup> Edition, Transportation Research Board.*

Synchro 11 was used to analyze the study area intersections and driveways for LOS. Synchro is an interactive computer program that enables planners and engineers to forecast the traffic impacts of new developments; conduct area-wide traffic forecasting studies; test different mitigation measures and compare different traffic scenarios. Synchro 11 utilizes HCM 6 methodology to analyze intersection delay and LOS.

### 4.2. Peak Hour Operational Analysis

Calculations for the LOS at the key intersections and project access drives are provided in **Appendix D**. The 2022 existing and 2025 background analyses are based on the lane geometry and intersection control shown in **Figure 2**, while the 2025 background plus project analyses are based on the lane configuration and intersection control shown in **Figure 5**. It should be noted that the signalized intersections were analyzed using optimized cycle lengths and splits. The results of the peak hour LOS analysis for existing, 2025 background, and 2025 background plus project scenarios are summarized in **Table 4**. The key intersections and project access drives are expected to operate at acceptable LOS under 2022 existing, 2025 background, and 2025 background plus project scenarios.

**Table 4 – Peak Hour LOS Analysis**

Intersection	2022 Existing		2025 Background		2025 Background plus Project	
	AM	PM	AM	PM	AM	PM
	Delay (s) (LOS)	Delay (s) (LOS)				
<b>Chocolate Drive and 5<sup>th</sup> Avenue/Drive A (#1) All-Way Stop Controlled</b>	6.9 (A)	7.0 (A)	6.9 (A)	7.0 (A)	6.9 (A)	7.0 (A)
<b>Sun Valley Boulevard and 5<sup>th</sup> Avenue (#2) Signalized</b>	9.0 (A)	6.7 (A)	9.6 (A)	7.1 (A)	9.6 (A)	7.1 (A)
<b>Sun Valley Boulevard and 2<sup>nd</sup> Avenue (#3) Signalized</b>	<b>75.8 (E)</b>	<b>38.5 (D)</b>	<b>38.1 (D)</b>	<b>49.1 (D)</b>	34.2 (C)	34.2 (C)
<b>Chocolate Drive and 2<sup>nd</sup> Avenue 2-Way stop Controlled</b>	0 (A)	6.9 (A)	0 (A)	6.9 (A)	6.4 (A)	7.1 (A)

### 4.3. Left Turn Storage Bay Analysis

Left turn storage bay analysis was conducted for signalized exclusive left turn movements anticipated to be impacted by the addition of project traffic at the study area intersections (Intersection #3). The analysis was conducted using the Synchro 11 software to obtain 95th percentile queues. The left turn storage bay calculations include AM and PM peak volumes. The length of the desired storage per lane was taken to be the maximum of the two peak hours. Calculations are provided in **Appendix E**. The calculated required left turn storage lengths in the existing, 2025 background, and 2025 background plus project conditions are summarized in **Table 4**. As evaluated, the existing signalized left turn storage bays were found to have adequate storage length to serve 2021 existing, 2025 background, and 2025 background plus project traffic volumes.

**Table 5 – Left Turn Storage Bay Analysis Results**

Intersection Left Turn Movement	Control and Storage Length	Desired Storage		
		2021 Existing	2023 Background	2023 Background Plus Project
<b>Sun Valley Boulevard and 2<sup>nd</sup> Avenue (#3)</b>	Signalized			
Northbound Left	225'	85'	97'	201'
Southbound Left	200'	66'	73'	73'

## 5. BICYCLE/PEDESTRIAN/TRANSIT FACILITIES

This section of the report details bicycle and pedestrian access to local attractions.

### 5.1. Local Bicycle/Pedestrian Access and School Walking Routes

The nearest pedestrian/bicycle attractions are located along Sun Valley Boulevard, about a half mile east of the project site. Pedestrian and bicycle facilities are minimal in the vicinity of the project site. Dedicated bicycle lanes are provided along Sun Valley Boulevard. Through the residential community, low-volume and low-speed streets are bicycle-friendly, however, portions of 5<sup>th</sup> Avenue and Chocolate Drive are currently unpaved. 2<sup>nd</sup> Avenue does not have existing dedicated bicycle lanes but does have sidewalks on one side of the road. The sidewalk is along the north side of 2<sup>nd</sup> street and then transitions to the south side of the street at the intersection of 2<sup>nd</sup> Avenue and Whittemore Way. The sidewalks are planned to be extended into the proposed development.

### 5.2. Public Transportation

Washoe County provides public transportation services through the Regional Transportation Commission of Washoe County, Nevada (RTC Washoe). RTC Washoe currently operates Bus Route 5 along Sun Valley Road. The nearest bus stops are located approximately a half mile from the project site near the intersections of Sun Valley Boulevard and 5<sup>th</sup> Street (#2) and Sun Valley Boulevard and 2<sup>nd</sup> Avenue (#3).

## 6. CRASH DATA SUMMARY

Crash data was requested for the four (4) existing study intersections from the NDOT Safety Engineering Division for the most recent four-year period (January 1, 2018 – December 31, 2021). The crash data for the study intersections is summarized in **Table 5**. The intersection crashes include those crashes on both the major and minor streets of the key intersections during the three-year analysis period. No crashes were reported at the intersection of Chocolate Drive and 2<sup>nd</sup> Avenue (#4).

**Table 6 – Crash Data Summary**

Int. Num.	Intersection Name	Total Crashes	Property Damage Only	Injury	Fatal
1	Chocolate Drive and 5th Avenue	1	1 (100%)	0 (0%)	0 (0%)
2	Sun Valley Boulevard and 5th Avenue	19	12 (63%)	7 (37%)	0 (0%)
3	Sun Valley Boulevard and 2th Avenue	24	13 (54%)	10 (42%)	1 (4%)
4	Chocolate Drive and 2nd Avenue	0	0 (0%)	0 (0%)	0 (0%)
<b>Total</b>		<b>44</b>	<b>26 (59%)</b>	<b>17 (39%)</b>	<b>1 (2%)</b>

A total of 44 crashes were recorded at the four (4) intersections in the most recent three-year period. Those 44 crashes resulted in 17 injury crashes (39%), 26 property damage only crashes (59%) and one fatal crash (2%).

## 7. CONCLUSIONS/RECOMMENDATIONS

The project traffic of the Chocolate Drive development is not anticipated to have significant impacts to the key study intersections. The proposed development is anticipated to generate traffic volumes resulting in the following recommendations:

- The developer is recommended to install R1-1 “STOP” signs with appropriate pavement markings for the egressing access drive approaches along Chocolate Drive per current Manual on Uniform Traffic Control Devices (MUTCD) Guidelines.
- All on-site and off-site signing and striping improvements should be incorporated into the Civil Drawings and conform to the current MUTCD, as applicable.
- The developer is recommended to install R11-3a “Local Traffic Only” sign at the intersection of Chocolate Drive and Gepford Parkway to discourage residents of the multifamily development from exiting from 5<sup>th</sup> Avenue.
- The intersection of Sun Valley Boulevard and 2<sup>nd</sup> Avenue (#3) operates at LOS D in the Background AM and PM peak hour scenarios. With optimized signal timing, the intersection operates at LOS C in the 2025 Background plus Project AM and PM peak hours. Therefore, it is recommended that the County work with RTC Washoe to optimize the signal timing at the intersection of Sun Valley Boulevard and 2<sup>nd</sup> Avenue (#3) to accommodate future traffic volumes.
- The project is not anticipated to have significant impacts to the study intersections and the surrounding street network.

Hi David,

We would like to see the driveway access on Brownlee Lane analyzed as part of the Traffic Study and not the adjoining street.

Thanks.

Subject: RE: Chocolate Drive Multi-Family Development Traffic Scope

Mitch,

Thank you for the response. I forgot to follow-up with some clarification that there is also an access drive located at Brownlee Lane. It is harder to see due to the grading hatching on the site plan. Would you like to see that intersection as well as Brownlee and Sun Valley included in the traffic study as well? Six intersections seems like a lot of intersections for a project of this size, so I will defer to you.

Thank you and have a good Thanksgiving,

Subject: RE: Chocolate Drive Multi-Family Development Traffic Scope

Hi David,

Washoe County's threshold for the requirement of a Traffic Impact Report (TIR) is if the development project will generate 80 or more weekday peak hour trips. For this project a TIR will be required.

Per the attached site map for the Chocolate Drive Project the driveway intersections with W 4th St. and W 5th St. will need to be evaluated as well as these roadway intersections with Sun Valley Blvd. If there are any driveway location changes to the attached site plan those driveway intersections and the corresponding roadway intersections with Sun Valley Blvd. will have to be analyzed as well.

I also attached RTC's Traffic Report Guidelines for your reference to help you with the TIR scope and requirements that is acceptable to Washoe County as well.

If you have any questions please let me know.

Thank you.

Subject: Chocolate Drive Multi-Family Development Traffic Scope

[NOTICE: This message originated outside of Washoe County -- DO NOT CLICK on links or open attachments unless you are sure the content is safe.]

Mitch,

Thank you for the call yesterday. I have attached a copy of the site plan for our client's project along Chocolate Drive. I am seeking a scope for a traffic study for this project. The project is tentatively 240 multi-family units. Please let me know if you would like me to propose a set of intersections and count hours for existing conditions.

Thank you,

**APPENDIX C**  
**TRIP GENERATION CALCULATIONS**

Project Ultra Clean Blue Diamond  
 Trip generation for Multifamily Housing (Low-Rise), Not Close to Rail Transit  
 Designed by AKT Date October 20, 2022 Job No. 192178025  
 Checked by DJG Date \_\_\_\_\_ Sheet No. 1 of 1

**Kimley » Horn**

#### **TRIP GENERATION MANUAL TECHNIQUES**

ITE Trip Generation 10th Edition, Average Rate Equations

Land Use Code - 220 Multifamily Housing (Low-Rise)  
 Land Use Sub Category Not Close to Rail Transit  
 Setting/Location General Urban/Suburban  
 Independent Variable - Dwelling Unit(s)  
 Number of Units (X) - 240

T = Trip Ends

#### **Peak Hour: Weekday, Adjacent Street Traffic**

#### **One Hour Between 7 and 9 AM**

Average Rate			Directional Distribution:	
$T = (X) * 0.4$	Trip Ends Per	Dwelling Unit(s)	24%	Entering 76% Exiting
$T = 96$	Trip Ends		23	Entering 73% Exiting

#### **Peak Hour: Weekday, Adjacent Street Traffic**

#### **One Hour Between 4 and 6 PM**

Average Rate			Directional Distribution:	
$T = (X) * 0.51$	Trip Ends Per	Dwelling Unit(s)	63%	Entering 37% Exiting
$T = 122$	Trip Ends		77	Entering 45% Exiting

#### **Daily Weekday**

Average Rate			Directional Distribution:	
$T = (X) * 6.74$	Trip Ends Per	Dwelling Unit(s)	50%	Entering 50% Exiting
$T = 1618$	Trip Ends		809	Entering 809% Exiting

#### **Non-Pass-By Trip Percentage**

#### **Non-Pass-By Trip Volumes**

AM Peak 100%	AM Peak 23 Entering	73% Exiting
PM Peak 100%	PM Peak 77 Entering	45% Exiting

Note: Rounding may occur in calculations

#### Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.  
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.  
Queue shown is maximum after two cycles.
