

EGGHEAD PLANTERS

WHAT YOU'LL NEED:

- Eggs
- Soil
- Grass seeds
- Water
- Permanent marker

INSTRUCTIONS:

1. Boil some eggs. Place eggs and water in saucepans and bring to a boil. Turn the stove off when water starts to boil and leave eggs in the hot water for 15 minutes.
2. Once the eggs have cooled, chop off the top of the eggs and gently scoop the egg out of the shell with a small spoon.
3. Draw the face on the eggshell using permanent marker.
4. Sprinkle soil into the shell until it is 3/4 full.
5. Add a good layer of grass seeds and then sprinkle soil on top of the seeds.
6. Water every day and keep it in the sun.
7. Within a few days grass should start sprouting! Give your eggheads a "haircut" every few days and watch as it grows back!
