

MCM end-user Equipment Inventory

MCM Coordination Effort

- You will be required to provide the following:
 - Contact Name:
 - Agency Name:
 - Email Address:
 - Phone number:
- The MCM program operates on a limited number of user licenses. So it will be imperative that each organization only dedicate 1 individual to obtain this access. Currently, Don Thornberry in the Washoe County Radio Shop maintains and operates this system, and he can also be contacted for information if an agency does not wish to utilize a license.
- For verification, Each agency will receive an Excel spread sheet with the current amount of radios that are in the MCM system. It will be each agencies responsibility to verify that they have the radios that appear on that sheet.
- To validate what is on record, we will need to obtain MCM access and make sure all the information on each radio is correct. Prior to the final system cut over we will need a contact from each agency that can help our team coordinate events and work on a smooth transition into the new system.

Radio verification

• Excel Sheet

Radio Validation

- Over the years the system have been migrated, data corrupted, and various changes in staff.
- MCM data is only as good as the information provided.
- Like any database the information needs to be validated, this requires participation from all agencies, and groups to ensure the data within MCM is correct.
- Intent is to use the Excel document and physically go through inventory and than make update on Excel, and than make sure that the changes are entered into MCM.
